

# One-Stop Caregiver App

Pair my Care, United Kingdom 

## About the client

Axela Care is an established provider of private care and live-in care services for the elderly, ill, disabled people, and people with special needs. The main focus of the company is an up-to-date approach to offering such services via specialized software solutions. Digital solutions the company creates, help Axela Care approach the main goal - streamlined, accessible private care service opportunities that can be easily accessed and managed through all-in-one solutions. This includes the Pair my Care marketplace, a dedicated caregiver mobile app for care workers, and more.

## Delivered solution

Pair my Care is a specialized digital marketplace where you may find care workers for relatives or other people with special needs, and where specialists may find private care and live-in care job opportunities.

For this, care seekers get an intuitive all-in-one interface that allows them to:

- Add several care recipient profiles so that you could manage all the services for people who aren't able to use software;
- Search care workers by location and date of availability, as well as through a myriad of other filters;
- Contact available care workers to specify the details of cooperation;
- See care worker ratings and testimonials of previous employers;
- Configure a custom working schedule through a specialized pop-up section and state it to the care worker;
- Use the Care Team section to see all the previously hired specialists and re-hire them if needed.

In turn, specialists providing private and live-in care services get a dedicated mobile caregiver app where they can:

- Post a job with individually set conditions, descriptions, and professional specifics;
- Search job offers with the help of rich filters;
- Use a calendar to set and track schedules;
- Get timely notifications;
- Put down personal care notes.

Pair my Care is an easy-to-use digital marketplace that connects users with special care workers seeking requirements and specialists offering private care services. Such care apps make the lives of both people with special needs and their relatives or close ones much easier.

## Challenges

### Finding & hiring care workers

It is difficult to find and hire well-qualified care workers without spending days on end searching, going through tons of bureaucracy, and putting unnecessary costs into it. And specialized centers usually pose fees and conditions of their own.

### Getting exactly the specialist you need

It is even more challenging to hire exactly the care worker you require to handle specific needs, work with especially critical cases, or provide care according to the shifting conditions at a fitting schedule.

### Lack of remote opportunities

Hiring care workers still mostly involves going on Craig's List or a similar service and getting swamped with tons of irrelevant offers. This takes a lot of time while giving you low confidence in the final choice. The same issue is experienced by care workers looking for a job. Building caregiver apps is a great way to solve all of the listed challenges.

## Solutions

### One-stop all-in-one platform

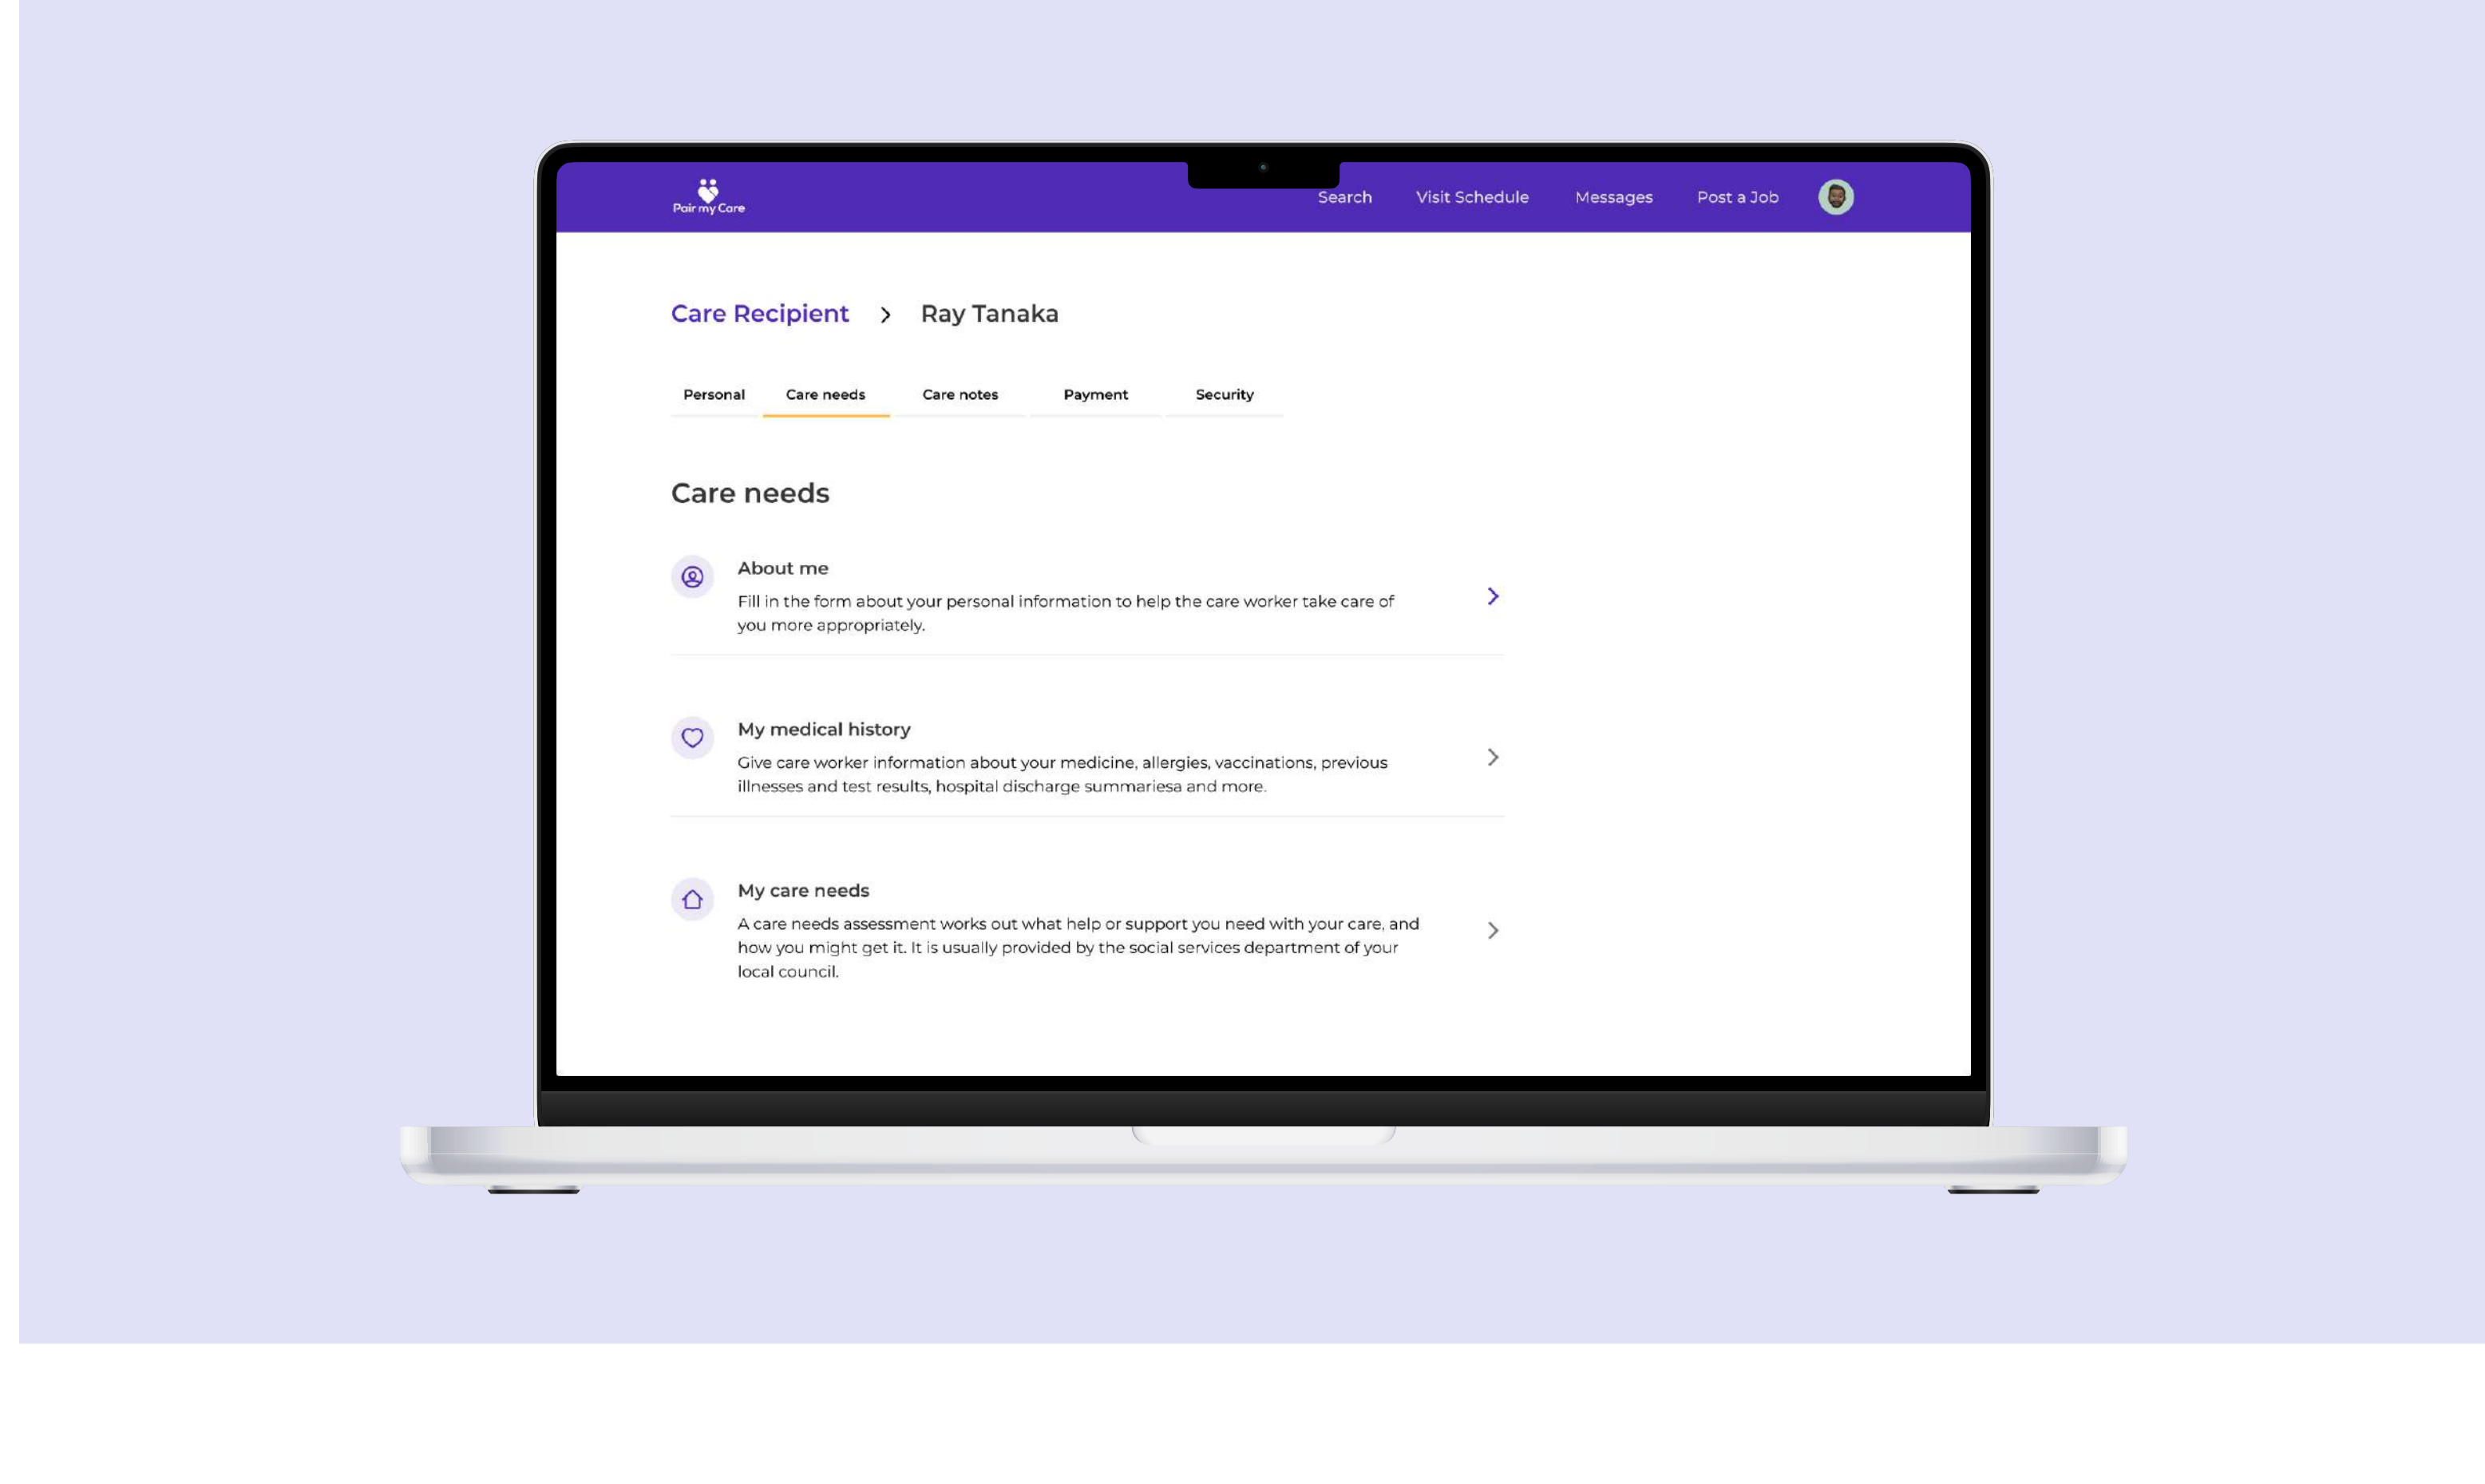

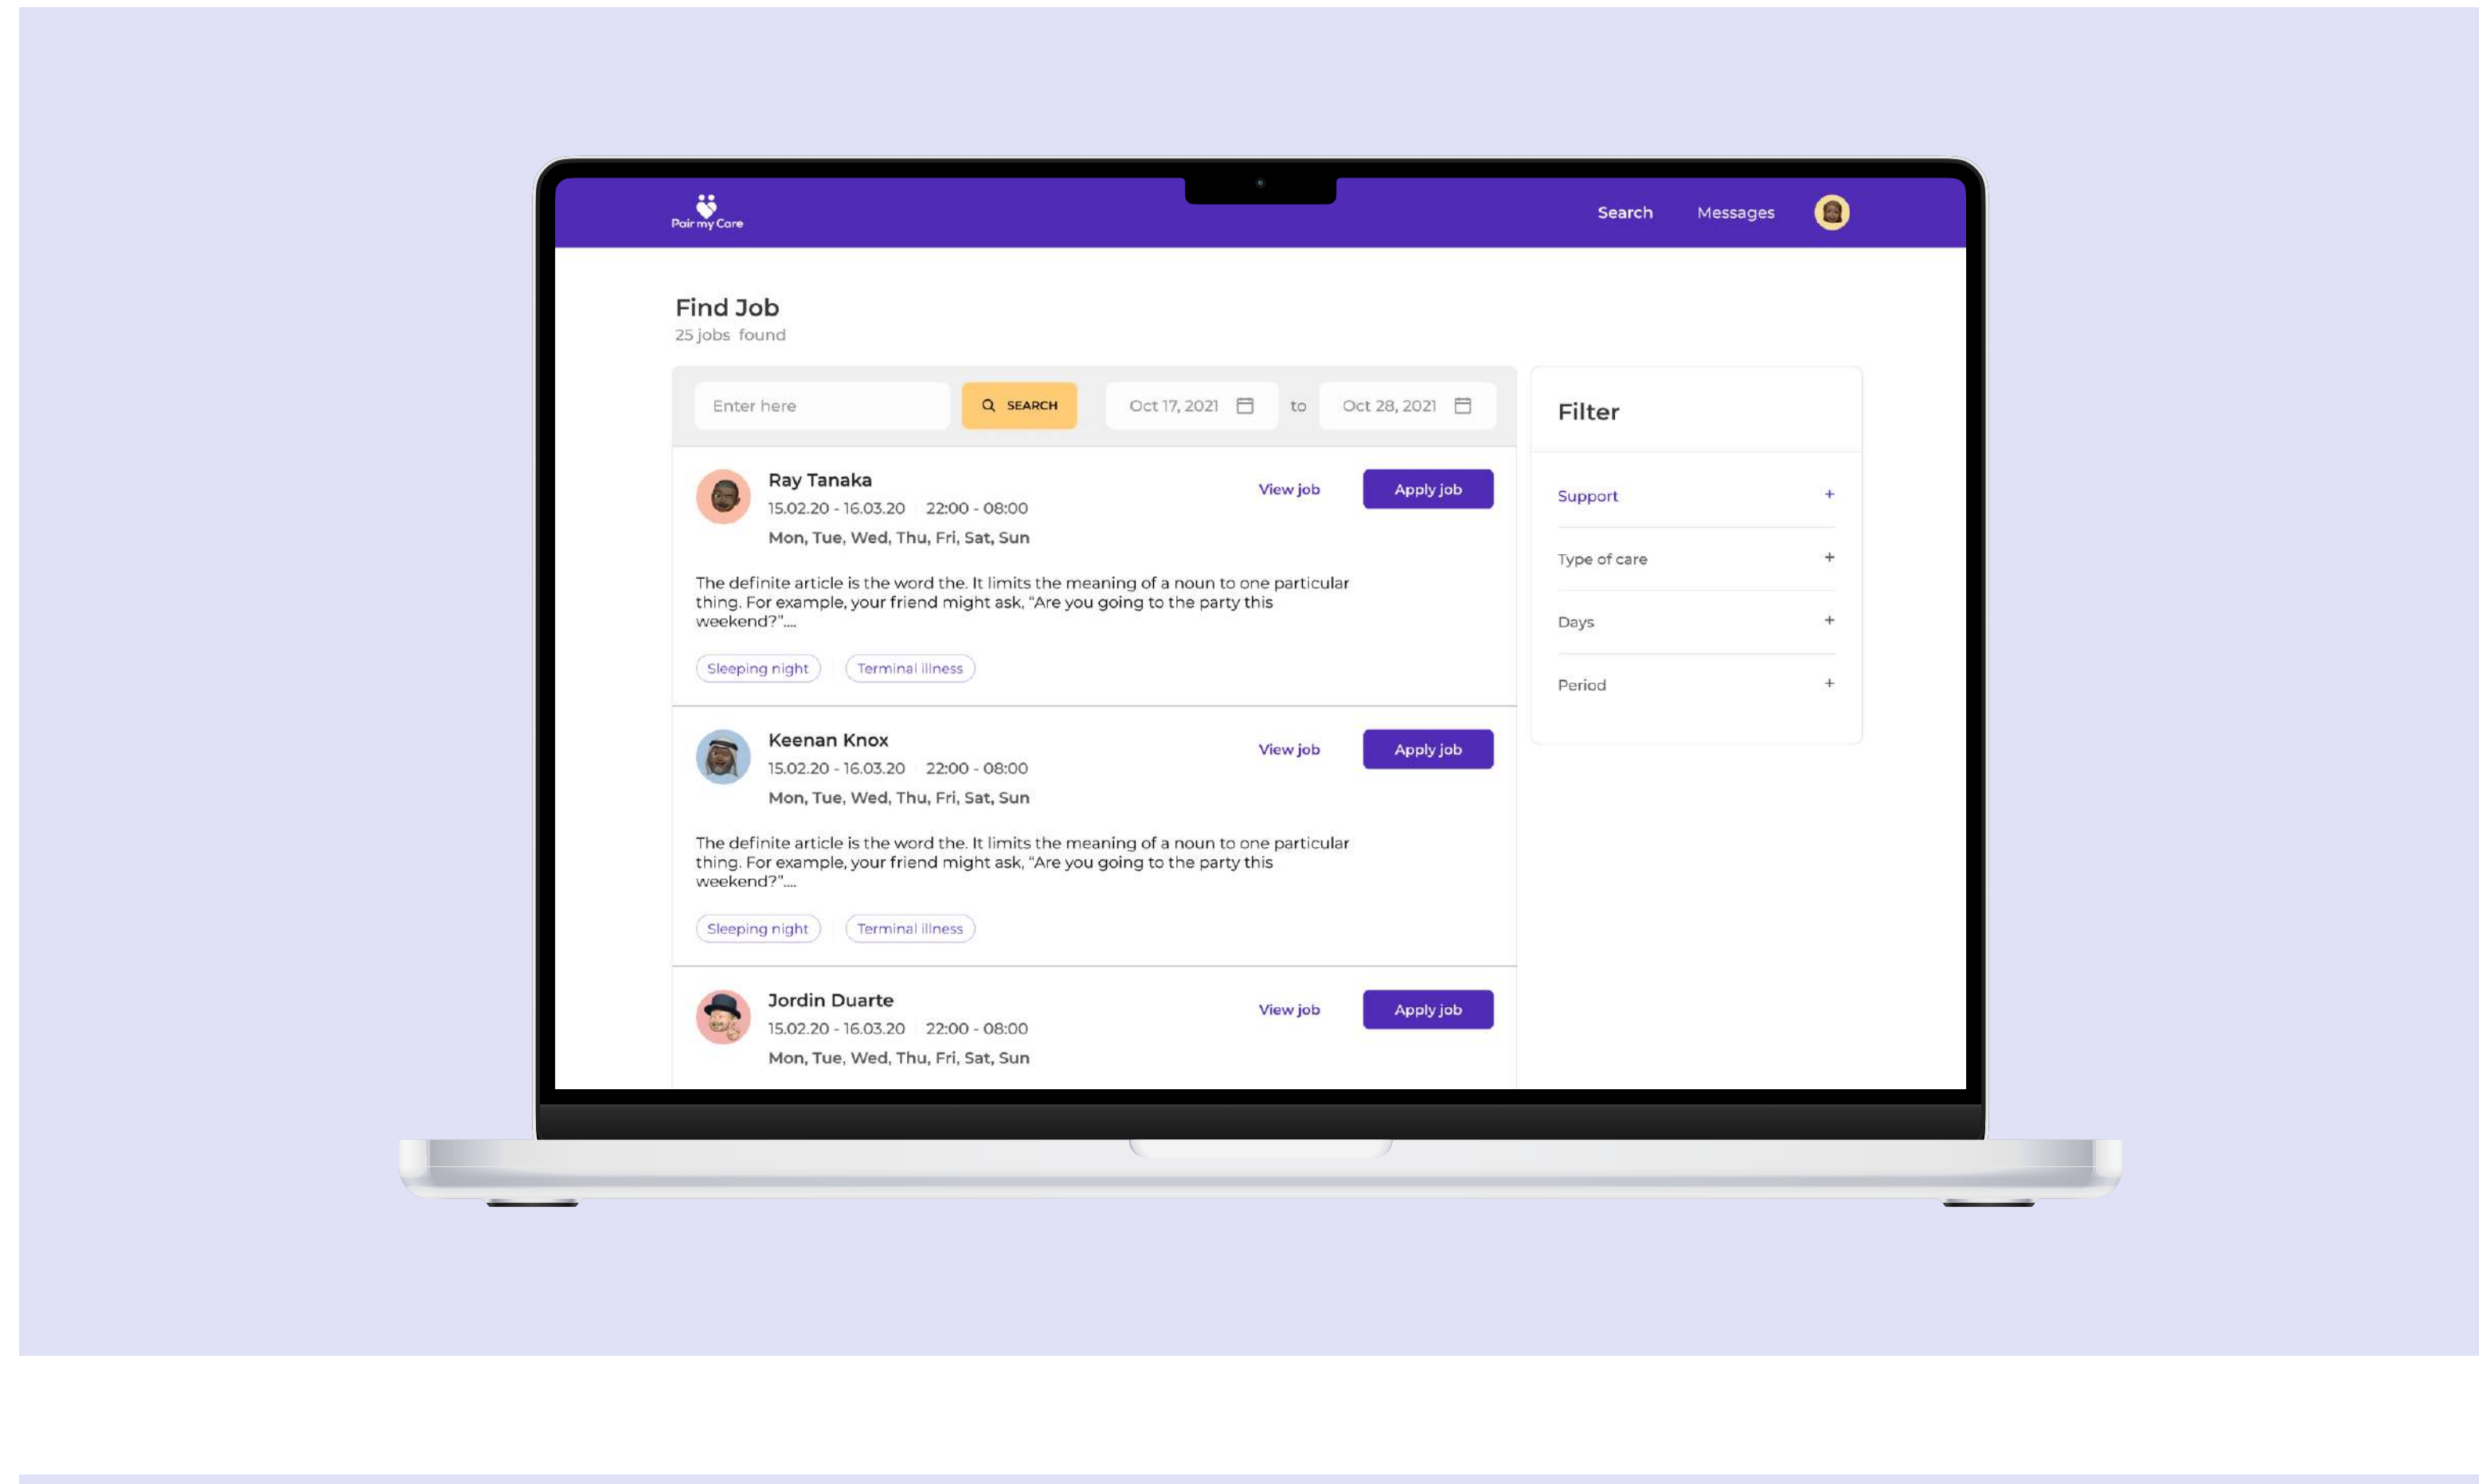

Pair my Care provides versatile opportunities for seeking and hiring the care workers you need via the care app with an intuitive interface filled with search filters, personalized features, and rapid hiring opportunities. Find, communicate with, hire, and rate care workers all in one place.

### Smart search driven by exact needs

You may add several care recipients in one account and fine search care workers for them based on their language, specific skills, condition experience, gender, and even driving license to hire specialists who can reach the care recipient in the fastest way possible.

### A mobile app for caregivers

Care workers may conveniently post their professional profiles to find work opportunities, schedule workflows with newly-acquired care recipients, get timely notifications, and keep a personal record of care notes.

## Client about us

"Pair my Care was and remains a highly responsible project with a clear yet very demanding goal. Thanks to a timely collaboration with Zade, we have been able to build the existing marketplace and a dedicated mobile care worker app based on the market's best practices. As a result, we have a solution that looks pretty familiar to most ordinary software users from the get-go and does its job of connecting care seekers and care workers perfectly."
